**Refrigerator & Upright Freezer: Measurement Cheat Sheet**

Use this as a guide to make sure the appliance you want fits in the space you have available.

1. Measure the narrowest doorway or hallway from outside the home to the location where the appliance will be installed.
   - Width of narrowest hallway / doorway in inches:
   - Appliance depth OR width must be smaller than the width above.
   - Most refrigerator doors and some home doors can be removed if necessary.

2. Measure the opening where the appliance will go.
   - Enter space measurements:
     - width
     - depth
     - height
     - clearance
   - Clearance is the distance from back wall to the next closest object.

3. Verify the appliances you’re considering to fit within the measurements you took in step 2.
