

HUSQVARNA GARDEN TRACTOR BUYING GUIDE

What to consider before making your choice.

The larger and more open the grass areas, the more important for the tractor to have a generous cutting width. If the area has lots of obstructions like trees and bushes, it's more important that the cutting width is small enough for the tractor to move through the tightest passages.

- When mowing high and coarse grass, the most effective cutting deck is the side ejection type.
- By using different types of accessories our tractors can be adapted for collection, mulch and ejection to suit your lawn type and mowing habits.
- A tractor with a hydrostatic transmission is much easier to operate than a tractor with manual transmission. With manual transmission you have to stop the tractor each time you change gears.
- For maximum comfort, choose a tractor with pedal-operated transmission, where speed and direction are controlled by separate pedals for forward and reverse.
- A tractor equipped with a wide range of accessories offers versatility all year round. Adding a trailer will make working in the yard easier.
